

“Imbalance on Threshold Graphs and Bipartite Permutation Graphs” Errata

Jan Gorzny

February 3, 2021

1 Preliminaries and Elsewhere

The definition of a split partition contains minor errors, and the observation that $N(C_j) \subseteq N(C_i)$ for $j > i$ is not technically correct - it should be the *closed* neighbourhood of these sets. Errors of this nature (using open neighbourhoods instead of closed) appear elsewhere, particularly in the proofs for threshold graphs. As far as I know, the results are still true, and an upcoming version of these results will correct the issues.
